DSD PE Terminal
Manhole Traps

'click' on a product image to learn more

DSD standard Terminal manhole traps fabricated in PE installed in Hong Kong.

July 2018

As the Drainage Services Department (DSD) and building developers start installing 21st Century drainage systems the focus is to:

- Eliminate maintenance costs
- Significantly extend service life
- Lower Global Warming Potential (GWP)

Cast Iron P-traps or Terminal Manhole Traps are used to prevent odors caused by sewer gas escaping from manholes, however they have a limited life span due to internal corrosion and require more frequent unblocking as they age and PE has GWP footprint 77% less than cast iron.

P-Traps fabricated in PE provide a 100 year operating life without maintenance and generally remain self-unblocking throughout their lifetime due to the smooth interior of PE.

Harbour North development, Contractor for Sun Hung Kai Properties installs DN225 PE P traps with rodding eye into gravity PE pipelines.
